# CELLPHONE ROBBERIES AFFECT HALF THE STREETS OF SÃO PAULO

Type                      Area                      Medium  
**Journalism**           **Crime**                   **Information Visualization**

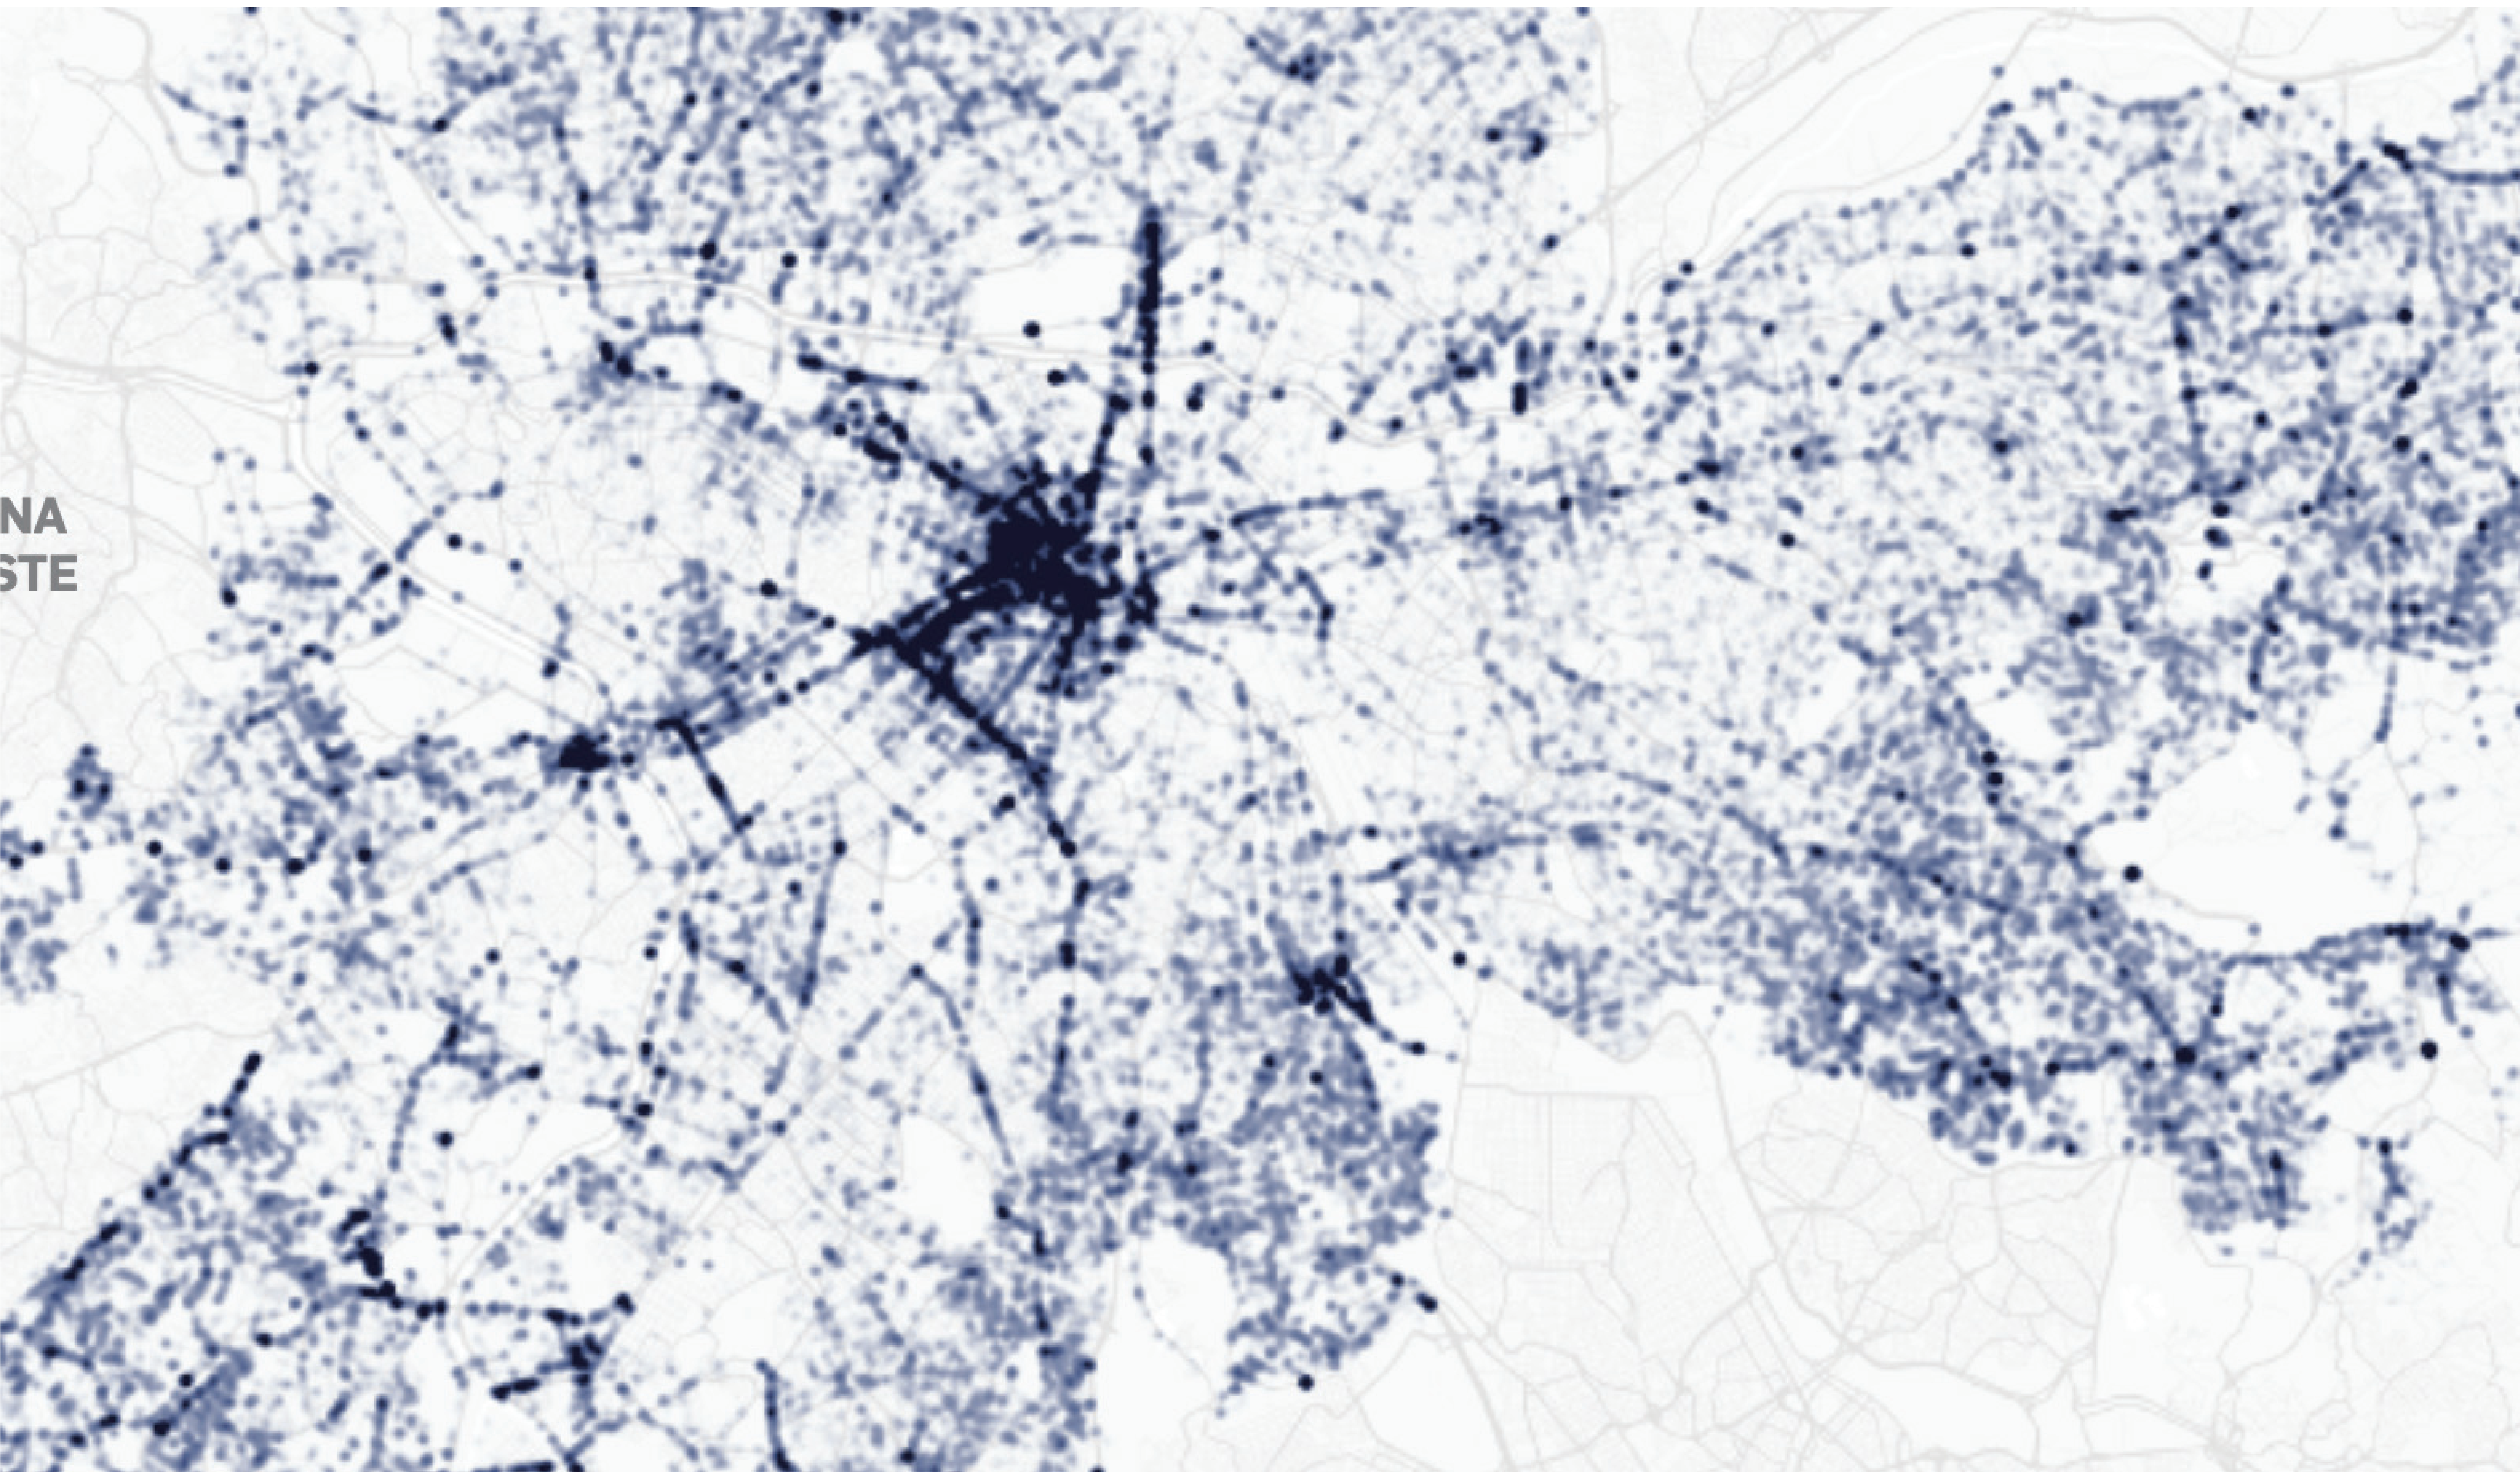

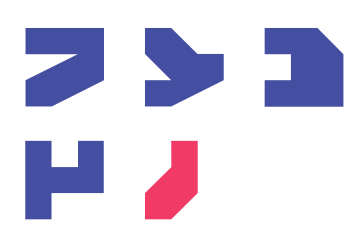

In 2017, “O Estado”, São Paulo’s second-largest newspaper, published a data-driven story on the front page and as an interactive piece on their website, highlighting cell phone robberies in São Paulo. Through a series of maps and graphs, the team tried to show how this type of crime affects all citizens and visitors. While there are certain hotspots, the crime has spread into every corner of the city. Through interactive components, readers can compare crimes by day and night and explore hotspots in more detailed infographics.
